## Hepatitis B virus

#### Rosalba:

Age: 57 year old female

Background: Born in US, never travel

PMHx: None

Family Hx: none

Social Hx: Lives with husband with hepatitis B

HPI: Visiting with GI doctor and wanted to know if she has

hepatitis B

### Rosalba: What test would you order

A: HBsAg

B: HBsAg, Anti-HBc

C: HBsAg, Anti-HBc, Anti-HBs

D: HBV DNA

E: CMP

### Rosalba: What test would you order

A: HBsAg

B: HBsAg, Anti-HBc

C: HBsAg, Anti-HBc, Anti-HBs

D: HBV DNA

E: CMP

#### Rosalba: actual test ordered

HBsAg and CMP

Comment by GI: Please advise pt that she does not have hepatitis B virus.

GI continue to check for the same test every 6 months. Is that correct?

#### Rosalba:

Should have ordered: HBsAg, Anti-HBc, Anti-HBs.

If all negative

What should you do next?

#### Rosalba:

Should have ordered: HBsAg, Anti-HBc, Anti-HBs.

If all negative

What should you do next?

Hepatitis B Vaccine!!!

### Indication for HBV vaccine:

- -Any non immune adult desiring vaccination
- -Sexually active persons who are not in a monogamous relationship (any person with more than 1 sexual partner with in the past 6 months)
- -Sexual partners of persons who are HBsAg positive
- -Persons seeking evaluation or treatment for STD
- -Men who have sex with men
- -Household contacts of persons who are HBsAg positive
- -Resident & staff member of institution for person who are developmentally disabled
- -Current or recent injection drug user
- -Health care & public safety workers with anticipated risk of exposure
- -Person with ESKD (HD or PD)
- -International travelers to regions with intermediate or high levels of endemic HBV
- -Person with chronic liver disease
- -Person with HIV
- -Pregnant patient with risk of infection or serious outcome from infection

### Indication for HBV vaccine:

- -Any non immune adult desiring vaccination
- -Sexually active persons who are not in a monogamous relationship (any person with more than 1 sexual partner with in the past 6 months)
- -Sexual partners of persons who are HBsAg positive
- -Persons seeking evaluation or treatment for STD
- -Men who have sex with men
- -Household contacts of persons who are HBsAg positive
- -Resident & staff member of institution for person who are developmentally disabled
- -Current or recent injection drug user
- -Health care & public safety workers with anticipated risk of exposure
- -Person with ESKD (HD or PD)
- -International travelers to regions with intermediate or high levels of endemic HBV
- -Person with chronic liver disease
- -Person with HIV
- -Pregnant patient with risk of infection or serious outcome from infection

#### Steve:

Age: 40 year old male

Background: Parents immigrated from Asia

PMHx: none

Presentation: routine exam

Family Hx: does not recall family history of HBV or liver cancer

Social Hx: does not drink alcohol, married to Caucasian women,

plans to start family within a year

### Steve: question

What should patient be screen for?

A: HBsAg

B: Anti-HBc

C: Anti-HBs

D: HBeAg

E: A and B

### Steve: question

What should patient be screen for?

A: HBsAg

B: Anti-HBc

C: Anti-HBs

D: HBeAg

E: A, B & C

#### Who should be screen for HBV

- -Born/raised in region with high rate of HBV. Asia, Africa, South Pacific, European Mediterranean, Eastern Europe, South America, Honduras, Guatemala, Middle East (except Israel & Cyprus)
- -US born not vaccinated whose parents born in endemic areas
- -Household or sex contact HBsAg positive
- -IV drug use
- -multiple sex partners or h/o STD
- -Men who have sex with men
- -H/O incarceration
- -H/O HCV or HIV
- -Renal replacement therapy
- -Pregnancy
- -Elevated liver test of unknown cause

#### Who should be screen for HBV

- -Born/raised in region with high rate of HBV. Asia, Africa, South Pacific, European Mediterranean, Eastern Europe, South America, Honduras, Guatemala, Middle East (except Israel & Cyprus)
- -US born not vaccinated whose parents born in endemic areas
- -Household or sex contact HBsAg positive
- -IV drug use
- -multiple sex partners or h/o STD
- -Men who have sex with men
- -H/O incarceration
- -H/O HCV or HIV
- -Renal replacement therapy
- -Pregnancy
- -Elevated liver test of unknown cause

### Steve:

HBsAg positive/anti-HBs negative Anti-HBc positive HBeAg positive/anti-HBe negative HBV DNA 20,000,000 **ALT 84** Platelets 200,000 Serum albumin 3.9 Total bilirubin 0.9 FibroScan 2.4kPa (F1) eGFR 83 Ultrasound no mass/AFP WNL

### What do you tell Steve

-He has HBV and need to consider treatment

-His close contact need to be screen for HBV, if no HBV, will need vaccination

-He should consider imaging for screening for HCC

#### Rosa:

Age: 59 year old female

Background: Born in US, never travel

PMHx: None

Family Hx: none

HPI: Admitted to ICU for acute elevation of liver test ALT 3000

and confusion

Exam: pupils equal round and reactive to light

### What test do you order?

A: Acute hepatitis panel

**B:** Consult hepatology

C: Consult neurology

D: CT head

E: order different test

### What test do you order?

A: Acute hepatitis panel

B: Consult hepatology

C: Consult neurology

D: CT head

E: order different test

### Test order

- Hep A IgM
- Anti-HBc IgM
- HBs Ag
- Hep C Ab
- PT/INR

### Test results

- Hep A IgM negative
- Anti-HBc IgM positive
- HBs Ag positive
- Hep C Ab negative
- PT/INR 4

### Rosa

Diagnosis with acute hepatitis B

What additional question do you ask?

#### Rosa

Diagnosis with acute hepatitis B

What additional question do you ask?

How did she get Hepatitis B virus?

### Zhong:

Age: 34 year old female

Background: Immigrated from Asia ~15 years ago

PMHx: none

Family Hx: none

Social Hx: lives with husband

HPI: presented to ED with acute right lower quadrant abdominal pain.

CT with heterogeneous mass inferior right liver 6.4cm, small amount hyper dense perihepatic & pelvic fluid concerning for bleed.

AFP 333, biopsy proven HCC

### Zhong: What HBV test do you order?

A: HBsAg

B: Anti-HBc IgG

C: HBeAg

D: HBV DNA

E: A & B

### Zhong: What HBV test do you order?

A: HBsAg

B: Anti-HBc IgG

C: HBeAg

D: HBV DNA

E: A & B

# Zhong: Which test belongs to her

A: HBsAg+, Anti-HBs-, Anti-HBc+, HBeAg-, Anti-HBe+, DNA 3M

B: HBsAg+, Anti-HBs-, Anti-HBc+, HBeAg+, Anti-HBe-, DNA 3000

C: HBsAg-, Anti-HBs+, Anti-HBc+, HBeAg-, Anti-HBe+, DNA <10

## Zhong: Which test belongs to her

A: HBsAg+, Anti-HBs-, Anti-HBc+, HBeAg-, Anti-HBe+, DNA 3M

If DNA was 3000 then Inactive chronic hepatitis B

B: HBsAg+, Anti-HBs-, Anti-HBc+, HBeAg+, Anti-HBe-, DNA 3000

If DNA was 3M then Immune-tolerant chronic hepatitis B

C: HBsAg-, Anti-HBs+, Anti-HBc+, HBeAg-, Anti-HBe+, DNA <10 Resolved previous infection

## Zhong: teaching points

She has HBV from previous infection. Should she get US yearly?

HBV with increase risk of HCC, should get US/axial imaging q6M

- -Cirrhosis
- -Asian + male >40yo or female >50yo
- -sub-Saharan African decent >20yo
- -persistent ALT elevation & DNA >10,000 for few years
- -Family history of HCC

#### Minh:

Age: 60 year old male

Background: Immigrated from Asia ~30 years ago

PMHx: CHB, rheumatoid arthritis, DM, CKD 4

Family Hx: uncle who died of HCC

Social Hx: drinks alcohol occasionally

Disease characteristics: Elevated HBV DNA and ALT

### Minh: labs

HBsAg positive/anti-HBs negative HBeAg negative/anti-HBe positive **HBV DNA 4200 ALT 65** Platelets 135,000 Serum albumin 3.3 Total bilirubin 1.3 **INR 1.3** eGFR 29 Ultrasound normal, AFP 5

#### What patient should undergo treatment for HBV

- -Acute liver failure
- -Infection in immune-active phase or reactivation phase
- -Cirrhosis
- -Immunosuppressed patient

#### What patient should undergo treatment for HBV

- -Acute liver failure
- -Infection in immune-active phase or reactivation phase
- -Cirrhosis Minh's FibroTest 0.77 (F4)
- -Immunosuppressed patient

### HBV available treatment

#### Neucloside

- -lamivudine (LAM)
- -entecavir (ETV)
- -telbivudine (TEL)

#### Neuclotide

- -adefovir dipivoxil (ADV)
- -tenofovir disoproxil (TDF)
- -tenofovir alafenamide (TAF)

Interferon (finite/48weeks)

-peginterferon alfa 2a

#### Joetta:

Age: 47 year old female

Background: Immigrated from Africa ~9 years ago, married with a

children

PMHx: none

Presentation: stage 2 left BCA, dx 3 months ago, on chemotherapy, presented with pruritus, yellowing of eyes. Chemo was change from Adriamycin, cyclophosphamide a month ago

Family Hx: none

Social Hx: no alcohol

Labs: ALT 1462, INR 1.6

### Joetta: What test do you order?

A: Hep A total

**B: Anti-HBs** 

C: Anti-HBc IgM

D: Anti-HBc IgG

### Joetta: What test do you order?

A: Hep A total

**B: Anti-HBs** 

C: Anti-HBc IgM

D: Anti-HBc lgG

And Anti-HA IgM, Hep C Ab

#### Joetta:

HBsAg positive/anti-HBs negative
HBeAg negative/anti-HBe positive
HBV DNA 8810
ALT 3000
Platelets 251,000
Serum albumin 3.9
Total bilirubin 8.1
Ultrasound no mass/AFP 14.4

# Prophylatic oral antiviral therapy for HBs Ag+ or isolated Anti-HBc Ab IgG receiving B-cell depleting therapy

- -rituximab or afatumumab
- -Prednisone >10mg/d for 4 weeks
- -anthracycline derivatives
- -tumor necrosis factor-alpha
- -tyrosine kinase inhibitors

### Thank you

Question?
